Iterative Evaluation Model	3
Tutor Feedback	4
Student Surveys	4
Additional Qualitative Evaluation	5
APPENDIX: EMEX Student Surveys 2020 - 2021	6

Introduction

The EMEX project-based courses are based on a blended mobility concept that integrates international online courses and an intensive on-site workshop in each cycle. To ensure that the concept actually improves over time, a mix of quantitative and qualitative evaluation methods are employed.

The results from the first evaluation are set as a benchmark for following iterations in order to assess positive or negative developments in the respective areas. After each evaluation, concepts and teaching materials are revised and improved for subsequent evaluation.

The first iteration was evaluated using qualitative feedback from the students and the teachers, collecting individual positive and negative remarks, clustering them and reflecting them in a group discussion. For the second and third iteration, EMEX adapts selected quantitative methods for specific aspects.

Evaluation Methods

Method	Method description, content and goals
Tutor Feedback	Structured Feedback after each course with Post-Its on a visual collaboration canvas.
Student survey	 Mix of multiple-choice questions, scale questions and open questions that address the following areas: Perceived sociability in on- and offline activities. (e.g., based on sociability scale by Kreijins et al.) Student satisfaction with learning material. Good practices and challenges during the course. Overall student satisfaction with online courses and blended mobility concepts.
Additional qualitative Evaluation	Varying qualitative methods to gather further insights. E.g.: Teaching logs for every session Learning diaries Interviews between tutors / teachers to explore the strengths and weaknesses of the course concept

To make the evaluations comparable, all EMEX teaching cycles are followed by the same rough structure of evaluation. The results of each evaluation are discussed among all EMEX partners to derive action strategies from this for the following courses.

It was also agreed that each cycle will be evaluated by a different partner.

Figure 1: EMEX Iterative Evaluation Cycle

Tutor Feedback

At the end of each course, all tutors meet online to give structured feedback by first answering 3 questions individually:

- What went well?
- What didn't go well?
- What insights do I gain?

Following this, action strategies for the next course are developed in a discussion.

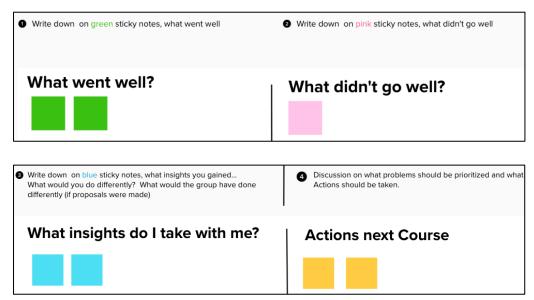

Figure 2: Feedback Canvas for Tutors

Student Surveys

The surveys are taken directly after the final event, since most of the students are present and thus the greatest possible participation can be ensured. Further reminders will be sent after the completion of the course. The aim is to achieve a coverage of at least 50%.

Another goal is to keep the surveys as comparable as possible. However, as each course has different contents and the concept is continuously adapted and improved, the questions have to be adjusted from course to course. The guiding principle is to change as little as possible, but as much as necessary.

The student survey for the spring course in 2020 consisted of 21 questions in total, including 3 multiple choice questions, 12 scale questions and 6 open questions, allowing free text.

The scale questions (with a range from 1 to 5) evaluated the course goal, the course organization and the learning success from the students' perspective. 6 further open questions were formulated to acquire details about good practices and challenges during the course (see Appendix).

By and large, the survey was adopted for the autumn course.

Since the course was more extensive, 2 questions on learning success were added and a few questions were slightly rephrased (see Appendix).

For the last EMEX course, the survey was kept compact Of the total of 10 questions, 9 were open questions to obtain the most detailed conclusive information possible.

Additional Qualitative Evaluation

After each course, a further qualitative evaluation is carried out. The methodology can vary, depending on the course concept and also on the availability of the participants.

The aim is to have an open exchange of ideas with no predefined questions, so that absolutely unforeseen topics can also come to light.

This exchange can take a variety of forms. It can be a teaching diary, a reflective conversation between two teachers about the course, or even course diaries requested by participating students.

The aim is mainly to discover unexpected phenomena and identify their possible causes.

For the EMEX Spring course 2020 the tutors were asked to write summaries of their tutor-sessions directly after the session. The tutors are asked to document good practices, problems and surprising findings in a chat forum, and other tutors are encouraged to comment and give feedback on the findings, in order to be able to provide immediate explanations or assistance if necessary.

For the EMEX autumn course 2020 two tutors of two different groups met for a reflective conversation about the course. The interview was recorded so that it can be transcribed and further analysed.

For the spring course of 2021, as in the first course of 2020, the mentors were asked to make short diary entries after each session.

APPENDIX: EMEX Student Surveys 2020 – 2021

Student Survey | Spring 2020 University-industry partnerships on the matter of content creation for emerging media technologies. **EMEX Virtual Production Course - Your** Feedback The following survey is voluntary, but we very much value your feedback. It helps us to improve and apply for continuing funding of our project. The information provided will be processed only in an anonymized fashion. The feedback feature does not give us the possibility to see who provided which answer. Where is your university? Finland Germany UK What is your study subject?
